A Completed transfer: fixed graph and fixed interface

Fly brain + nerve cord

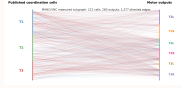

brain

VNC

MaleCNS anatomy reference

Frozen VNC rate core

11,000 model nodes
485,074 signed edges

Measured connectivity excerpt
212 cells; 260 outputs

No learned core weights

Fixed motor map

260 motor-output channels

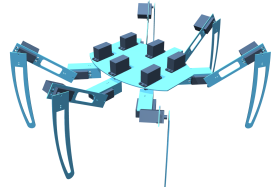

↓

Antagonist-style mapping

↓

18 joint targets

Non-fly hexapod model

MuJoCo | 6 legs | 18 joints | home pose

Measured outcomes Forward contrast: $+0.236$ m Odd-yaw contrast: $+6.92°$ Coxa-phase gate: not met

Contrasts vs 12 SD-matched weight-permuted nulls; same body and fixed motor map.

B Planned translation layer (not evaluated)

66-D observations → encoder → 4-D commands → fixed descending map + frozen core → decoder → 18 joints
